

JANHAVI SHAILENDRA JADHAV

Baltimore, MD | (443) 418-0917 | janhavij0603@gmail.com | linkedin.com/in/janhavi-jadhav006

PROFESSIONAL SUMMARY

Graduate student with 2+ years of experience building AI-powered applications, intelligent data systems, and production-grade APIs. Experienced in developing LLM-enabled solutions, retrieval-augmented generation (RAG) systems, and end-to-end software platforms using Python, FastAPI, PostgreSQL, and modern AI frameworks. Skilled at translating complex technical challenges into scalable, user-focused solutions through strong collaboration, problem-solving, and software engineering practices. Passionate about building practical AI products that improve decision-making, efficiency, and user experience.

EDUCATION

University of Maryland, Baltimore County | *Master of Science in Information Systems* | GPA: 3.97/4.0

MD, USA | May 2026

University of Mumbai | *Bachelor of Engineering in Electronics* | GPA: 3.42/4.0

MH, India | May 2023

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, Python, SQL, Java, React, FastAPI, Flask, Streamlit

LLM & Agentic Systems: Anthropic API, OpenAI API, Groq API, LangChain, MCP (Model Context Protocol), Multi-Agent Systems, Tool Invocation / Function Calling, Structured Outputs, Streaming Responses, Multi-Step Reasoning, Prompt Engineering, RAG Pipelines, Knowledge Graphs, Fine-Tuning

Databases & Vector Stores: ChromaDB, Qdrant, PostgreSQL, MySQL, SQLite

MLOps & DevOps: Docker, REST API Design, CI/CD, Model Monitoring, Airflow, Kafka, AWS (S3, EC2)

Software Engineering: Unit Testing, Integration Testing, Code Quality Practices, Technical Documentation, Debugging, API Design, RESTful Service Integration, Agile Development

AI / ML: PyTorch, Hugging Face Transformers, Scikit-learn, Embeddings, NLP, Model Evaluation (Precision, Recall, F1, Hallucination Scoring)

PROFESSIONAL EXPERIENCE

MicDots

January 2026 - May 2026

Project Management Intern

- Supported technology and pilot initiatives through project coordination, operational reporting, and stakeholder collaboration.
- Developed reporting dashboards and tracking systems to monitor progress and key metrics.
- Collaborated with cross-functional teams to improve execution efficiency and communication.

Tata Consultancy Services

January 2024 - July 2024

Assistant Systems Engineer

- Built and maintained production data pipelines processing 5M+ records/day within a large-scale SaaS enterprise environment, feeding ML model training and real-time inference workflows.
- Deployed ML-powered services via REST APIs integrated into enterprise SaaS applications, supporting classification and forecasting at scale; wrote technical documentation for each integration.
- Engineered preprocessing and feature engineering workflows that cut model training latency by 35%.
- Implemented automated data validation systems that improved dataset reliability by 30%, reducing downstream model errors.
- Collaborated with cross-functional teams to operationalize models and communicate results to non-technical stakeholders.

TCR Innovation

March 2022 - May 2023

Data Analyst Intern

- Developed ML models on datasets exceeding 1M records, improving prediction accuracy by 18% through feature engineering and hyperparameter tuning.
- Applied NLP techniques - tokenization, embeddings, and text classification, to extract actionable insights from unstructured customer feedback.
- Evaluated model performance using precision, recall, F1-score, and cross-validation; documented findings for reproducibility.
- Built dashboards to communicate AI-driven insights to non-technical business stakeholders.

PROJECTS

FinSight - Multi-Agent Financial Research System

June 2026

- Architected a production-grade multi-agent system orchestrating 4 specialized agents (Planning, RAG, Research, Synthesis) to generate cited financial analyst reports from SEC 10-K filings in under 12 seconds, with streaming response delivery via FastAPI.
- Implemented hybrid RAG combining ChromaDB vector search across 1,138 chunks with a NetworkX knowledge graph of 366 risk nodes and 606 edges for richer, more accurate retrieval.

- Engineered an automated evaluation pipeline scoring every response for relevance, consistency, and hallucinations, with prompt injection guardrails, full SQLite audit logging, and 90%+ test coverage.
- Exposed the system via a typed FastAPI REST API (structured outputs) and Streamlit analytics

Market Intelligence Data Platform

April 2026

- Built a streaming financial data platform ingesting real-time market feeds via Kafka and transforming them with PySpark into a Snowflake data warehouse.
- Modeled analytics-ready datasets using dbt and exposed them through a FastAPI service and Superset dashboards used for investment signal analysis.
- Resolved complex infrastructure challenges including Kafka listener configuration, Snowflake MFA bypass for service accounts, and Airflow executor compatibility.

Product Sentiment Analysis Pipeline

January 2026

- Developed an AI-powered sentiment analysis application leveraging Hugging Face RoBERTa to classify 500K+ customer reviews.
- Built RESTful APIs and automated workflows to support scalable inference, monitoring, and deployment.
- Containerized services with Docker and implemented CI/CD pipelines for reliable software delivery.
- Designed monitoring dashboards to visualize sentiment insights, model performance, and operational metrics.
